

Version 2.0.3

User Guide

NOTICE: This version is not compatible with the previous versions. Please backup your database first as you will need to manually import your data back. Based on user feedback, we have removed a number of modules. Please see version change information below.

Requirements

- PHP ≥ 5.6 (≥ 7.0 recommended)
- MySQL ≥ 5.5
- Command line access (optional)

Using Codeigniter 3.1.6

Installation

- Copy all application files to the desired installation directory
- Create a database
- Open `application/config/production/database.php` and add your database credentials
- Open `application/config/production/config.php` and update your installation settings
- Run `php artisan migration migrate`
- If you do not have command line access, run the `daycare.sql` script in your database
- If you have CLI access, run `php artisan migration seed <table (optional)>`

The Table option can be left blank to run all available seeds.

Available seed options:

`php artisan migration seed users-` Create admin user

`php artisan migration seed groups-` Create admin, manager, staff and parent groups

Digital Technologies | <https://amdtllc.com> | info@amdtllc.com

*IMPORTANT! Remember to set your application to **production** in index.php when setup is complete! You can also set environment in your .htaccess and add **SetEnv CI_ENV development***

You will have a default admin user to login into your application for the first time.

Email: admin@app.com

Password: password

IMPORTANT! Remember to reset the password for the default admin account!

Support

We provide paid installation or upgrade support. Please visit <https://amdtllc.com/support> to choose a support plan.

Coming soon

- Parents access
- Attach photos to incident reports
- Child's photo gallery

Configuration

Logo

Logo image must be in /assets/img directory. A new logo can be uploaded in the settings page and will overwrite the current logo image file. For best results, your logo should be 200x45 pixels or 500x112 pixels.

Company settings

/application/production/config/config.php

You can configure your company settings in this configuration file.

If you are working on development instance, you can create a new folder inside config folder and copy config files in it, then edit your config development settings.

```
$config['company'] = array(
    'name' => 'DaycarePRO',
    'slogan' => 'Nice daycare',
    'phone' => '',
    'fax' => '',
    'email' => '',
    'street' => '',
    'city' => '',
    'state' => '',
    'postal_code' => '',
    'country' => '',
    'timezone' => 'America/New_York', //http://php.net/manual/en/timezones.america.php
    'google_analytics' => '',
    'currency_symbol' => '$',
    'currency_abbr' => 'USD',
    'date_format' => 'd M, Y H:ia',
    'logo' => 'logo.png', //logo must be in '/assets/img' directory
    'invoice_logo' => 'logo.png' //logo must be in '/assets/img' directory
);

$config['allow_registration'] = FALSE; //allow parents to register accounts
$config['allow_reset_password'] = TRUE; //allow users to reset password
$config['enable_captcha']=FALSE; //enable captcha on login and registration
$config['maintenance_mode']=FALSE; //Set your site to offline mode during upgrades
```

Change base_url to your site address. If you are accessing this installation on the web, it is highly advisable that you use SSL encryption (https).

```
$config['base_url'] = 'https://yoursite.com';
```

Language & Translation

/application/language/<language>

You can translate the application using the language files located in the path above.

To get started, copy the English folder with all the files included in to another folder named the language of your choice.

Change the language configuration to the same name as the folder you named above.

```
$config['language'] = 'english';
```

Open the language files in and edit the second part that is the translation to whatever language you have chosen.

Creating migration files

If you have made any changes to the database tables or created new tables, you can generate new migration files using

```
php artisan migration create
```

IMPORTANT: Your application must be in development environment in order to run this command.

Version Changes

Version 2.0.3 | 21 December, 2017

- Upgrade to use Codeigniter 3.1.6
- Upgraded child module
 - Updated invoicing
 - Added healthcare providers tab
 - Added incident report tab on notes
